Insights

Supply is concentrated in the city centre.
Commune de Genève has 1,235 listings (about 69%). The next largest neighbourhood, Grand-Saconnex, has 115.

Entire homes dominate.
69% of listings (1.23K) are entire homes or apartments and 31% (0.55K) are private rooms. Shared and hotel rooms are almost absent.

Occupancy varies widely by neighbourhood.
Among neighbourhoods large enough to compare ([TODO: state the minimum listing count used, for example 10]), estimated occupancy ranges from about 22% (Pregny-Chambésy) to 63% (Grand-Saconnex), against 42.59% overall. Smaller neighbourhoods are excluded because a handful of listings gives unstable estimates.

Premium prices do not guarantee higher occupancy.
Cologny (median 376.33, 17 listings), Collonge-Bellerive (median 323.16, 20 listings) and Chêne-Bougeries (median 226.50, 27 listings) show estimated occupancy of 36.28%, 39.14% and 37.95%, all below the market average. These are small samples, so treat the pattern as indicative.

Review scores barely separate listings.
The market average is 4.72, and most large neighbourhoods fall between 4.6 and 4.9, so ratings alone say little about performance.

Superhosts.
They are 19.45% of listings (0.35K). Their median listed price ($154.67) is below that of standard hosts ($153.67), . Their average rating is higher (4.84 vs 4.69), which is partly by definition because Superhost status requires high ratings. Estimated occupancy is essentially the same (42.68% vs 42.56%).

Recommendations for New Airbnb Hosts in Geneva

1. **Pick the neighbourhood with evidence in mind.** Compare occupancy, competition (listing count) and typical median price, and do not assume a premium area will fill more often.

2. **Price near the median for your area and room type** at launch, then adjust based on bookings and reviews.

3. **Entire homes dominate supply and estimated revenue**, but check occupancy by room type before choosing. Supply share alone does not show what guests prefer.

4. **Build good reviews early.** Ratings are high across the market, so a weak rating stands out.

5. **Aim for Superhost status as a trust signal**, not as a way to charge more. The data shows no price premium for Superhosts.
